

CARBORUNDUM ANTI-SLIP STRIPS

Introduction

Floorsafe Australia Carborundum Anti-slip Strips has been specially designed for installation over new and existing steps and stairways. It is applicable where pedestrian safety, stair appearance and stair longevity are the particular concerns. After selecting the required metal the surface is specially prepared & then treated with a special primer and left overnight to dry. Once dry a coat of Floorsafe two-part acrylic polyurethane is applied together with an aluminium oxide granule which provides the anti-slip properties. Two further colour coats are applied which locks in the anti-slip granules and forms a tough & long lasting wearing product

Ultimate In Anti-Slip Safety

Carborundum Anti-slip Strips provides the highest possible safety rating and is particularly suitable for external wet areas. Anti-slip Strips it exceeds the requirements of the Australian/New Zealand Standards AS/NZS 3750.6 and is approved to APAS-2911, 1441/2.

Material

- 1.6mm galvanised metal
- Stainless Steel
- Aluminium

Size

- 40mm
- 50mm

Length

- Available in 2400mm lengths or cut to required sizes

Colour

- Safety Yellow, Black & Grey

UV Resistant

Chemical Resistant

Available in a range of colours

Suitable for indoor & outdoor use.

Guaranteed for 5 years under normal conditions.

PRINCIPAL CHARACTERISTICS

- Tough, flexible and abrasion resistant
- Unlimited re-coat
- Excellent resistance to atmospheric exposure
- Excellent colour and gloss retention
- Resistant to splash of mineral and vegetable oils, white sprit, paraffins and aliphatic petroleum products
- Resistant to most chemicals
