# Installation and Maintenance Guide

Product: Fibreglass Ladder Rung Covers

## Installation Guide

Rung covers can be attached using glue adhesive (most efficient - does not require a hot work permit), self-tappers or pop rivets.

Any glues or adhesives should be tested prior to installation. Before installing fibreglass ladder rung covers clean/wipe over the surface and the back of the anti-slip strip, preferably with Acetone

Make sure any adhesives used are fully cured before opening the ladder to foot traffic

## Cleaning

Whilst Floorsafe Australia's products are resilient to dirt and contaminations they may, over time, become dirty depending on circumstances. After initial installation, if adhesives have been used, Floorsafe recommends avoiding cleaning for at least 24hrs or until the adhesive has fully set. Please refer to the adhesive manufacturer's recommendations.

Dry dirt and debris can easily be removed using a stiff-bristled brush and should be carried out on a regular basis. If the product has been subjected to spillages or the dirt has become embedded, neutral detergents can be used. Floorsafe Australia advises testing any cleaning products on the product before starting the cleaning process. This can be done in a discreet area of the installation.

Using the detergent, warm water, and a suitable brush; scrub the affected areas until clean. The excess water can be removed using a wet/dry vacuum cleaner. Where circumstances allow, the product can be hosed down without causing harm. However, care should be taken when the product has been stuck down and/or edge sealed as very high-pressure power washing or repeated washing could cause damage to sealants and adhesives.

## Maintenance

The security of the fixings/adhesives should be checked on a regular basis. Circumstances will vary, based upon the volume of foot traffic, etc. but, as a guide, monthly inspections would be advisable in high traffic areas.
